BOOTSTRAP 3 IS HERE.

LET'S TALK CHANGES,
# HOW TO CONVERT,
& WHY BOOTSTRAP ROCKS.

WHAT IS BOOTSTRAP

Created by a designer and a developer at Twitter, Bootstrap has become one of the most popular front-end frameworks and open source projects in the world.

Created in mid-2010 //
Over 20 releases //
2 major rewrites with v2 and v3 //

WHY USE BOOTSTRAP

Bootstrap is a powerful tool for front-end web development. It makes the creation of websites and apps **easier** and **faster**.

Customizable **//**
Consistency **//**

THREE BOOTSTRAP 3 CHANGES.
(That stand out to a newbie.)

FLAT DESIGN //
TYPOGRAPHY //
MOBILE-FIRST //

#1 – FLAT DESIGN

#2 – TYPOGRAPHY

Bootstrap 2.3 Jumbotron Headline

Bootstrap 3.0 Jumbotron Headline

#3 – MOBILE-FIRST

In this release, Bootstrap follows the **mobile-first approach** and makes your site always responsive by default.

If you don't need an adaptive site you can "turn off" this feature by adding some extra CSS.

HOW TO CONVERT

#1 – Use a conversion tool
bootstrap3.kissr.com //
code.divshot.com //

#2 - Convert manually
(Why would you do this?? Ready, set, discuss…)
